

Abstract of the Invention

A dispensing system that includes a housing and a cartridge which is to be inserted into the interior area of the housing. The housing includes a plurality of  
5 intersecting exterior sidewalls, a first end wall defining a dispensing throat, a second end wall, and a means for securing a cartridge within the housing. The cartridge includes a flexible bag, a plurality of products compressed within the flexible bag in the dispensing direction, a means  
10 for restraining the cartridge within the housing, and a means for releasing the products from the flexible bag.
